1. Secure the module to the mounting surface.
2. Connect the 6 pin Weather Pack connector to the mating connector on the Control Point main harness labeled ‘Liquid Valve’.
3. Attach the 3 pin CPC connector to the mating connector extension cable included. The extension cable has a 2 pin Weather Pack connector for connection to the liquid pump.
4. Install socket contacts on motor leads.
5. Temporarily connect motor leads to the 2 pin connector on the liquid drive module.

**IMPORTANT:** Leads should NOT come in contact with each other.

6. Operate system and verify the DC motor or liquid pump runs in the right direction.
   - If the motor runs backwards, reverse the motor leads.
7. Insert motor leads in the mating connector in the correct location.
